Spot Cooling

1.800.334.COOL (2665)

Your most valuable asset is your employees and air conditioning your entire facility may not be fiscally responsible when all you really need to cool are your employees.

In the heat of summer many facilities throughout the world experience extreme heat and humidity creating uncomfortable working conditions that create fatigue and loss of morale and ultimately lead to a loss of production.

Chiller Mfg can help alleviate the true source of problem, which is humidity, by installing a spot cooling system featuring the Polar Series Chiller.

POLAR - WATER CHILLER

EXPANDABLE FROM 5 thru 20 TONS

The Heart of your spot cooling system.

All of the critical components contained in one unit including your Tank, Pump, and Heat Exchangers.

OUTDOOR CONDENSING UNIT

1 UNIT REQUIRED FOR EVERY 5 TONS OF COOLING

Installing the condensing unit outdoors keeps the heat producing component out of your facility.

AIR HANDLER

1 UNIT REQUIRED FOR EVERY 5 TONS OF COOLING

Converts your chilled water into cool air and delivers a specified amount (CFM) of air for your system.

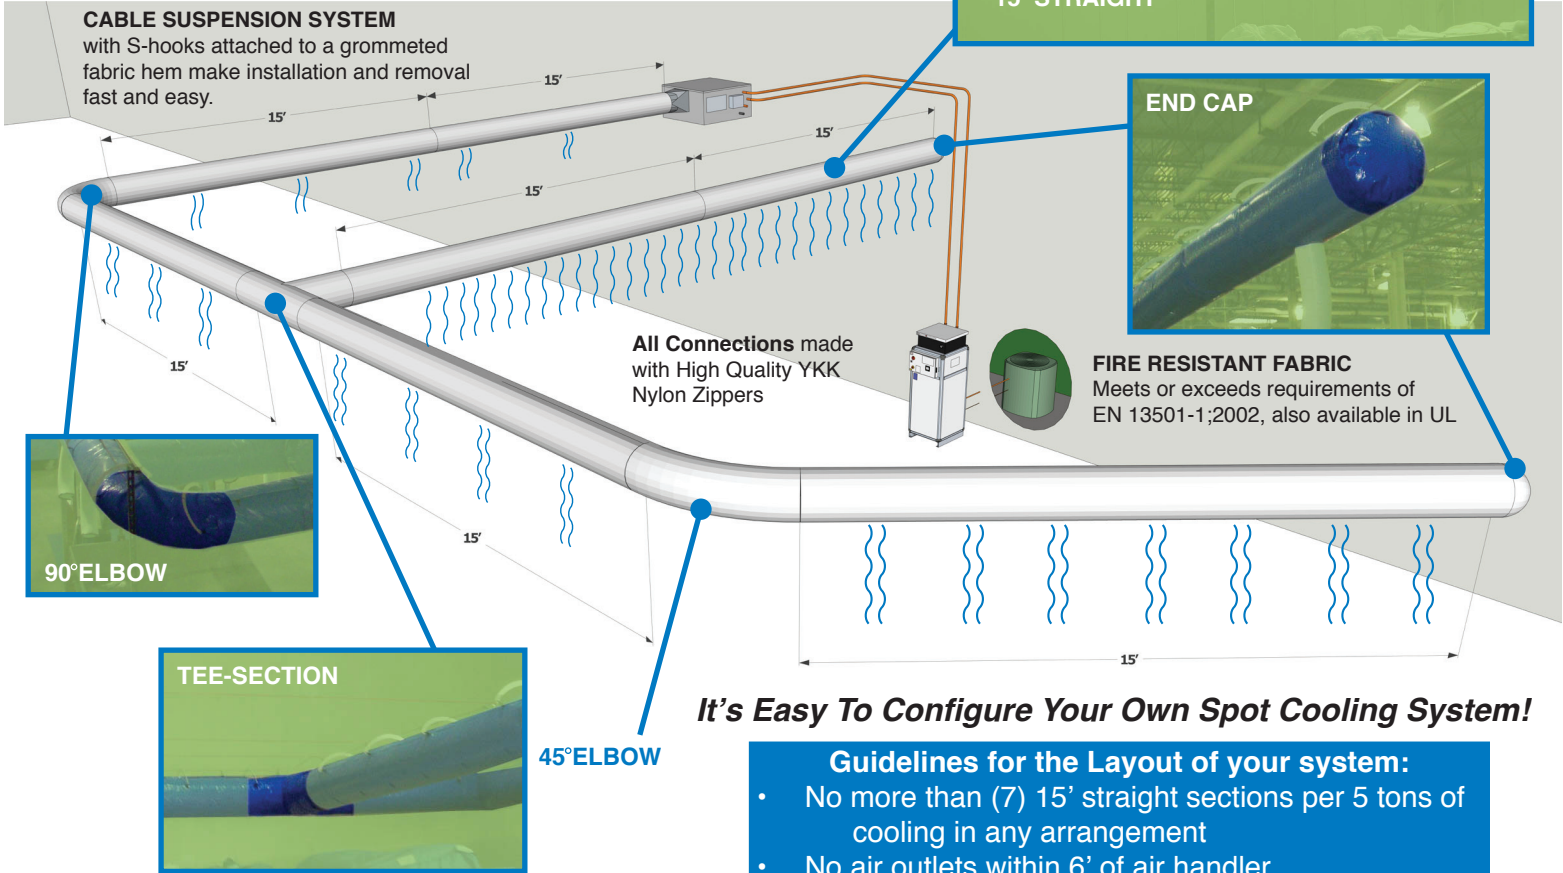

FABRIC DUCT

COMPLETELY MODULAR AND EXPANDABLE

The sections are joined with zippers and can be added/removed and reconfigured when your needs change

TYPICAL 5-TON SPOT COOLING INSTALLATION COMPONENTS

There are infinite possibilities with the layout of your spot cooling system. Below are some of the standard components used in a typical installation. Custom Sizes and shapes are available in an array of fabrics and colors.

- Guidelines for the Layout of your system:**
- No more than (7) 15' straight sections per 5 tons of cooling in any arrangement
 - No air outlets within 6' of air handler
 - Approximately 10 air outlets per 5 tons
